

OVERVIEW OF RECOMMENDED STEPS TO CREATE A PLANNING PROCESS SCHEME:

- Step 1: Form a working group with departments involved in the planning process
- Step 2: Develop and draft the different steps of the planning process via workshop and interviews
- Step 3: Provide a first scheme of this process and discuss it in the working group
- Step 4: Analyse how energy is already integrated in the existing process
- Step 5: Finalise the scheme and use it in discussions with politicians (and external stakeholders) as well as at the strategic level. Integrate feedback
- Step 6: Analyse how energy should be integrated in the process
- Step 7: Use and discuss the upgraded scheme (also find a common understanding with utilities and grid operators)
- Step 8: Link this scheme to decision trees for the energy supply solutions for an area
